1,1211 6711 This question paper contains 8 printed pages] 0 Roll No. S. No. of Question Paper : 6711 Unique Paper Code .: 323271101 Name of the Paper : Descriptive Statistics Name of the Course : B.Sc. (H) Statistics 0 Semester Duration : 3 Hours Maximum Marks : 75 (Write your Roll No. on the top immediately on receipt of this question paper.) Attempt 6 questions in all. Question No. 1 is compulsory. Attempt 5 more questions selecting 3 questions from Section A 6,6 and 2 questions from Section B. Use of simple calculator is allowed.

An urn contains four tickets marked with numbers 8. . (a)

8

112, 121, 211, 222 and one ticket is drawn at random.

Let A_i (*i* = 1, 2, 3) be the event that *i*th digit of the number

of the ticket drawn is 1. Discuss the independence of the

event A1, A2 and A3.

(b) State Baye's theorem. A and B are two weak students

of statistics and their chances of solving a problem in

statistics correctly are $\frac{1}{6}$ and $\frac{1}{8}$ respectively. If the probability of their making a common error is $\frac{1}{525}$ and

they obtain the same answer, find the probability that their

600

8

answer is correct.

C.

Section A

(a) Fill in the blanks :

1.

- (i) For a symmetric distribution, $\beta_1 = \dots$.
- (ii) If the attributes of A and B are independent,
 - then $\frac{(AB)}{N} = \dots$
- (iii) The algebraic sum of the deviations of 20
 - observations measured from 30 is 2. Therefore, mean
 - of these observations is
- (iv) Correlation coefficient is the of the
 - regression coefficients.
- (vi) If A and B are mutually disjoint events, then
 - $P(A \cup B) = \dots$

(b) In a random arrangement of the letters of the word

(7)

- COMMERCE, find the probability that all the vowels
- come together.

6.6

6711

- (a) Show that in a population with three attributes A, B
 - and C if :

7.

- (i) (AB) = (A) and (BC) = (B), then (AC) = (A);
- (ii) If (AB) = (A) and (BC) = 0, then (AC) = 0.
- (b) One bag contains 5 white and 4 black balls. Another bag
 - contains 7 white and 9 black balls. A ball is transferred
 - from the first bag to the second bag and then a ball is
 - drawn from the second. Find the probability that the ball
 - is white.

If d_i be the difference in the ranks of the *i*th individual

6)

in two different characteristics, then show that the maximum

value of :

(b)

5.

6.

(a)

$$\sum_{i=1}^{n} d_i^2 \text{ is } \frac{1}{3} (n^3 - n).$$
 6, 6

If X and Y are independent random variables with zero

means and standard deviations 3 and 4 respectively, then

find K so that X + 2Y and KX - Y are uncorrelated.

(b) If X and Y are two independent variables, show that :

 $r(X + Y, X - Y) = r^{2}(X, X + Y) - r^{2}(Y, X + Y)$

where r(X + Y, X - Y) denotes the coefficient of correlation

between X + Y and X - Y.

6, 6

h.

Section B

(a) State and prove Boole's inequality.

(vii). A. B and C are three mutually exclusive and

exhaustive events associated with a random

experiment. Given that :

 $P(B) = \frac{3}{2}P(A)$ and $P(C) = \frac{1}{2}P(B)$, then

P(B) =

(viii) The limits for rank correlation coefficient

(ix) Two uncorrelated variables be

independent.

are

(b) (i) If the two regression lines are 3x + 12y = 19,

3y + 9x = 46, then find correlation coefficient

between x and y.

(*ii*) If $P(A \cup B) = \frac{5}{6}$, $P(A \cap B) = \frac{1}{3}$ and $P(\overline{A}) = \frac{1}{2}$,

then find P(A) and P(B). Hence show that A and B are independent.

4.

(iii) If the lines of regression of Y on X and

4

- X on Y are respectively $a_1x + b_1y + c_1 = 0$
- and $a_2x + b_2y + c_2 = 0$, then prove that

 $a_1b_2 \le a_2b_1. \qquad \qquad 9 \times 1, 3 \times 2$

Show that the sum of the squares of the deviations of

a set of values is minimum when taken about mean.

In a frequency table, the upper boundary of each class

interval has a constant ratio to the lower boundary.

Show that the geometric mean G may be expressed by

the formula :

2.

(a)

(b)

 $\log G = x_0 + \frac{C}{N} \sum_i f_i (i - 1),$

Where x_0 is the logarithm of the mid-value of the first interval and C is the logarithm of the ratio between

upper and lower boundaries.

6, 6

3. (a) What do you mean by skewness and kurtosis of a

distribution ? Explain the methods of measuring skewness and kurtosis of a frequency distribution.

(b) Let X/f_i , $i = 1, 2, 3, \dots, n$ be a discrete series. If the

deviations $x_i = X_i - M$ are small compared with mean M,

so that $\left(\frac{x}{M}\right)^3$ and high powers of $\left(\frac{x}{M}\right)$ are neglected,

(i) $G = M\left(1 - \frac{\sigma^2}{2M^2}\right),$

then :

(ii)

$$\operatorname{Mean}\left(\sqrt{x}\right) = \sqrt{\operatorname{M}\left(1 - \frac{\sigma^2}{8\operatorname{M}^2}\right)},$$

where G is the geometric mean, M is the arithmetic mean

and σ is the standard deviation. 6, 6

(a) Explain the principle of least squares. Obtain the equation

of the line of regression of Y on X.
