(d) Find an approximate value of the integral

$$I = \int_{1}^{2} \frac{1}{1+x^2} \, dx$$

Using (i) Simpson's rule, (ii) Composite Simpson's rule for n=6.

Also calculate the error in each case.

- (a) Approximate the value of π/4 by using Simpson's 1/3rd rule.
 - (b) Apply Euler's method to approximate the solution of the Initial value Problem (IVP)

$$\frac{dy}{dx} = 2 + \frac{3y}{x}$$
, $1 \le x \le 6$, $y(1) = 1$, using 5 steps.

(c) Apply Modified Euler's method to approximate the solution of the IVP and calculate y(0.3) by using h=0.1

$$\frac{dy}{dx} = 1 + xy, \ 0 \le x \le 1, \ y(0) = 2.$$

(d) Use the Midpoint method to approximate the solution of

$$\frac{\mathrm{d}y}{\mathrm{d}x} = 2x + 3y, \quad y(0) = 0$$

with h=0.1. Determine y(0.2) and y(0.3).

Your Roll No.....

Sr. No. of Question Paper :	1943 · A
Unique Paper Code :	32355402
Name of the Paper :	GE-4 Numerical Methods
Name of the Course	Generic Elective CBCS (LOCF)
Semester	: IV
Duration: 3 Hours	Maximum Marks: 75

Instructions for Candidates

- 1. Write your Roll No. on the top immediately on receipt of this question paper.
- 2. Attempt any two parts from each question.
- All questions are compulsory and carry equal marks.
- (a) Find the interval in which the smallest positive root of the equation x³ - x - 4 = 0 lies. Perform three iterations of the bisection method to determine the root of this equation.

P.T.O.

2

- (b) Perform three iterations of the secant method to find a root of the equation $xe^x = \cos x$ by taking $p_0 = 0, p_1 = 1.$
- (c) Perform four iterations of the Newton-Raphson's

method to obtain the approximate value of $(17)^{\frac{1}{3}}$ starting with the initial approximation $x_0 = 2$.

- (d) Define Floating-point representation, Truncation error, and Global error with examples.
- (a) Define the order of convergence of an iterative 2. method. Determine the order of convergence of the Regula-Falsi method.
 - (b) Perform three iterations of the bisection method to find the smallest positive root of the equation $x^3 - 4x - 9 = 0.$
 - (c) Perform three iterations of the method of false position, to find the fourth root of 32.
 - (d) Perform three iterations of the Newton Raphson method to find the root of $f(x) = x \sin x + \cos x = 0$, assuming that the root is near $x = \pi$.

$f''(x_i)$	$=\frac{f(x_{i}+h)-2f(x_{i})+f(x_{i}-h)}{1-2f(x_{i})+f(x_{i}-h)}$
1 (~1)	

х	2	2.3	2.6
y = f(x)	0.6932	0.7885	0.9556

5

(b) The following table of values is given :

x	-1	1	2	3	4	5	7
y=f(x)	1	1	16	81	256	625	1 2401

Find f'(3) by Richardson Extrapolation with h = 4, h = 2 and h = 1 using the following approximate formula

$$f'(x_i) = \frac{f(x_i + h) - f(x_i - h)}{2h}$$

(c) Find an approximate value of the integral

$$I = \int_0^1 \frac{1}{1+x} \, dx$$

Using: (i) . Trapezoidal Rule, (ii) Composite Trapezoidal rule for n = 4.

Also calculate the error in each case.

1943

3. (a) Generate the forward difference table for the data

X	0	0.2	0.4	0.6	0.8
f(x)	0.12	0.46	0.74	0.9	1.2

Hence interpolate the values of f(0.1) by using Gregory Newton forward differences Interpolation formulae.

- (b) Define the average difference operator and the central difference operator. Prove that $\mu = \left(1 + \frac{\delta^2}{4}\right)^{\frac{1}{2}}$.
- (c) Given the following system of equations

$$x_{1} + x_{2} + x_{3} = 1$$

$$4x_{1} + 3x_{2} - x_{3} = 6$$

$$3x_{1} + 5x_{2} + 3x_{3} = 4$$

Perform three iterations of the Gauss-Jacobi method starting with $X^{(0)} = (1,1,1)$.

- (d) Find the unique polynomial of degree 3 or less such that f(0) = -1, f(1) = 0, f(2) = 15, f(3) = 80using the Newton interpolation. Interpolate at x = 1.5.
- 4. (a) Perform three iterations of the Gauss-Seidel method starting with $X^{(0)} = (1,1,0)$ to solve the

P.T.O.

r

<u>b</u>

following system of equations:

$$10x_1 + x_2 + 4x_3 = 31$$
$$x_1 + 10x_2 - 5x_3 = -23$$
$$3x_1 - 2x_2 + 10x_3 = 38.$$

(b) Solve the following system using the Gauss-Jordan method.

$$x + y + z = 7$$

 $x + 2y + 3z = 16$
 $x + 3y + 4z = 22$.

(c) Calculate the second order divided difference of

$$\frac{1}{x^2}$$
 based on the points x_0, x_1, x_2 .

(d) Determine the Lagrange form of the interpolating polynomials for the following data set

v l.	-1	0	1	2
^			1	11

Hence estimate the value of f(1.5).

 (a) For the following data, find f'(2.3) and f"(2.3) by using Central difference formulas
